

DCM ORGANIC FERTILISER for GRAPES FOR EXPORT

Technical Description

COMPOUND ORGANIC FERTILISER NPK containing magnesium 7-4-7 + (2)

- 7 % NITROGEN TOTAL (N) of which
7 % organically-bound nitrogen
- 4 % PHOSPHORUS PENTOXIDE (P_2O_5) soluble in water and neutral ammonium citrate
- 7 % POTASSIUM OXIDE (K_2O) soluble in water
- 2 % MAGNESIUM OXIDE (MgO) soluble in mineral acid

49 % ORGANIC MATTER

Characteristics

- compound organic fertiliser NPK containing magnesium 7-4-7 + 2 MgO
- with magnesium (2 % MgO); indispensable for a good photosynthesis and deep green leaves
- due to its mild action extremely suitable for the sensitive roots of young plants
- long-lasting and continuous action (75 up to 100 days), ideally suitable for young plants
- authorised for use in organic agriculture (only contains raw materials authorised in Annex II of the Council Regulation EC2092/91 on the biological production method and Amendments).
- 100 % organic: nutrients are gradually released by the microbial soil life + production of humus results in better rooting and less leaching
- in **MINIGRAN**[®]-form

Packaging

1.5kg boxes packed 256 boxes/euro-pallet (=384 kg)

Form

compound organic fertiliser in **MINIGRAN**[®]-form

= a micro-granule with dimensions between 800 and 2500 micron,
of which at least 80% between 1000 and 2000 micron

- √ each granule contains the same proportion of ingredients
- √ controlled nutrient release due to the meticulous selection, dosage and specific characteristics of the high-quality raw materials, as well as due to the production process
- √ up to 60 % more efficient distribution for uniform colour and growth
- √ will not be picked up while mowing. The fertiliser goes deep into the sward.
- √ faster starting action with the same long-lasting effect
- √ phosphorus sources are easily taken up for a better root development
- √ low in odour, dust-free application
- √ easy to apply with all measuring devices and professional spreaders

Instructions for use

The exact rate depends on the needs of the plant, the time of application and the nutritional reserve in the soil. If irrigation is used extensively, increase the rate of application.

PLANTING

Spread out the exact dosage and incorporate into the top layer and sprinkle

grapes..... 20-25 kg / 100m²

MAINTENANCE

At the outcome of leaf buds 15-20 kg/100 m²

After 2-3 months 15 kg/100 m²)

Extra tips

By mixing DCM VIVIMUS[®] into the plant hole, the soil will preserve its optimal structure, will not dry out so easily and will ensure a good rooting.

Vaporize regularly DCM Pholin Basalt Lava Meal over your grapevines for strong and healthy plants.
